

Reasons to Consider Cloud Accounting for Your Educational Organization

Sage Intacct's impact on your day-to-day can be transformative.

- » **Continuous consolidation:** Reduce spending numerous hours coordinating information across complex entity structures down to minutes through streamlined processes. Receive an instant view of metrics and drillable report views across entities, granting you more financial control for your organization.
- » **Shared dimensional chart of accounts:** Diminish chart of accounts that grow out of control with inconsistencies between entities. Reduce the number of entries from 10,000+ to 100s and easily add and configure a new entity in minutes. Sage Intacct provides instant shared access within and across entities.
- » **Dashboard analytics:** Eliminate slow, error-prone analytics that force finance leaders to manually input data in complex spreadsheets. Sage Intacct's customizable built-in and role-based dashboard capabilities allow instant capture of operational and financial data. Automatically track statistics including enrollment, cost per student, tuition fees, and other key metrics.
- » **Collaborative compliance:** Schools may rely on a single employee or small group of employees for all accounting functions. With Sage Intacct, user roles can be easily and properly segregated. Cloud accounting also provides an audit trail with GAAP compliance—which means you are audit-ready in just a few quick clicks.
- » **Simple setup and maintenance:** Quickly set up policies, procedures, workflows, and reporting for new departments, programs, or cost centers regardless of the complexity of your structure. Automatically "inherit" centralized definitions—workflows, charts of accounts, period definitions, and lists (vendors, customers, etc.)—across these areas for a standard, organization-wide configuration.
- » **Real-time reporting:** Ensure proactive management by quickly producing accurate, up-to-the-minute financial reports and analytics. Analyze financial insights efficiently with real-time visibility and instant roll-up reporting. Strategize on key decisions on all aspects of the organization with Sage Intacct's open API that allows real-time visibility across external integration systems.
- » **Trusted and secure source:** Secure 24/7 delivery of critical financial data and sensitive client information. Sage Intacct automates backup and disaster recovery, so your organization and financial leaders will have less disruption and more time for strategic activities.
